

## PRESS RELEASE

### **NEW PARTNER “FOUND”: LOSTnFOUND ON THE RIO PLATFORM**

Page 1 of 2

- **New Marketplace service: fleet.tech Connect from LOSTnFOUND**
- **Transparent tracking of vehicles, containers or load carriers – completely without the RIO Box**
- **Vehicle data from mixed fleets can be easily integrated on the RIO platform**

**Munich, 4 November 2020.** RIO has made an exciting new addition to its portfolio this autumn: the fleet.tech tracking solution from LOSTnFOUND has been available on RIO Marketplace since October. The fleet.tech Connect service can be used for every brand of truck and other assets without retrofitting the RIO Box. This enables mixed fleet operators to consolidate and evaluate all their positioning data on the RIO platform – for more transparency and more efficient fleet management.

“The RIO family keeps on growing,” notes Jan Kaumanns, CEO of the TRATON GROUP’s digital brand, as the year begins to draw to a close. “fleet.tech Connect from LOSTnFOUND will make it even easier for our customers to connect vehicles of different brands – and we are not limited to only trucks.” In addition to the networking of trucks from different brands, fleet.tech Connect also enables containers, load carriers, construction vehicles, etc. to be integrated. For Kaumanns, this is further proof, “that RIO is now also a logistics platform for the Internet of Things.”

How does it work? Customers of LOSTnFOUND use their cost-efficient fleet.tech® ARCUSlight location device for detailed positioning data. The joint fleet.tech Connect service integrates this data in the RIO platform and offers the user various functions in the fleet monitor: users can add assets to their fleet and see their location in the fleet monitor on the RIO platform in 15-minute intervals. The ten-day trip history allows vehicle locations and the route covered to be viewed. Existing and other LOSTnFOUND hardware already in use can also be connected within the fleet monitor on the RIO platform.

#### **LOSTnFOUND as an experienced partner**

“Thanks to our expertise in networking vehicles gained over a decade, our tracking solutions represent a valuable digital tool for efficient fleet management,” says Daniel Thommen, CEO and President at LOSTnFOUND, explaining the significance of the company, founded in 2009, and its solutions. “In the partnership with RIO, we set ourselves the goal of completely integrating (other) vehicles in the RIO platform within ten minutes! We’re proud to say that we succeeded thanks to the excellent IT infrastructure on both sides.”

The joint fleet.tech Connect service offers a further additional benefit for LOSTnFOUND customers: thanks to the existing programming interfaces, the positioning data on the RIO platform can also be passed on to partner services enabling, for example, the potential for route and order planning to be optimised.

**About RIO:** The TRATON GROUP has been offering its digital brand RIO since 2016, an open, cloud-based solution for the entire transport and logistics ecosystem. RIO bundles digital services. The aim is to network all parties involved in the delivery chain on one platform. Transparent data use within the transportation industry has often not been possible in the past. This was prevented by those involved having different isolated solutions. In contrast, RIO

**THE LOGISTICS FLOW.**
